

Hellroaring Drainage; "Huge whoomphs"

Centennials - Montana

Island Park

12/23/2018

Code

Latitude

44.57780

Longitude

-111.53700

Notes

"I was in the Hellroaring Drainage Yesterday, snow depths below 7,000' hover around 18", around 8,000' snow depths increase significantly but are still shallow i.e. less than 30". Witnessed the largest "whoomphs" I have ever felt (that's saying something since last Decemeber/Jan was horrendous), interestingly much of this was felt returning on the same skin [track](#), telling me this is a stubborn layer that may not give right away. The largest was a [collapse](#) in a meadow nearly 0.25 miles long."
