Skier triggered wind slab at Bridger

Bridger Bowl Bridger Range 11/23/2022 Code SS-ASc-R2-D1.5-I Elevation 7600 Aspect NE Latitude 45.81680 Longitude -110.92400 Notes

At 1:30pm on 11/23 I intentionally triggered a fresh drift of snow in a narrow <u>avalanche path</u> along the edge of the north bowl at Bridger. Northeast <u>aspect</u> at 7,600' elevation. The crown was 6-8'' deep consisting of snow that fell today, 20' wide and ran 250' vertical. SS-ASc-R2-D1.5-I.

Wind was moderate, gusting strong out of the north and west and transporting snow. There were 3-4" on lower mountain and 7-8" new up high. Snowpack is 1-2' deep. Prior to this storm, snow close to the surface had turned to small (1-1.5mm) facets during previous cold weather, capped by a thin crust (wind or sun) on many slopes.
