

Photo and observation from 01/20

From obs: "Large roller balls were observed in avalanche terrain on a SE aspect at 8,300'. Alongside this observation, rather wet, sticky snow was observed throughout the tour, causing multiple glopping incidents on our skins." Photo: E. Webb

Advisory Region Southern Gallatin Longitude -111.09W Latitude 45.14N

**Avalanche Details:** <u>Instability on Ramshorn Peak</u> Southern Gallatin, 2024-01-21
