

ECTP-14 in Beehive

Date

Sat, 11/30/2024 - 13:25

Activity

Skiing

Multiple pits yielded propagation in ECT test. Values varied between ECTP-9 and ECTP-22. Failures occurred on an ice crust ~20cm off the ground.

Pits were ~8,400' to 8,500' in elevation on across the basin on eastern and western aspects of Beehive basin proper. All pits (3) exhibited failure. We also noted occasional collapsing in the flats.

Region

Northern Gallatin

Location (from list)

Beehive Basin

Observer Name

E. Stutzman
