Activity

Snowmobiling

From email: "Maiden Voyage to Goose Lake for the season today. Lots of wind drifted snow everywhere and challenging riding conditions. Performed [Stability test](#) on shoulder of Mount Fox NE facing slope at 10,300'. HS 180cm. ECTP2 40cm down on Buried [Surface Hoar](#). ECTP 23 90cm down on MFcr with 1-2mm Facets. Saw several recent [wind slab](#) avalanches in steeper windloaded terrain around Goose Lake, but limited activity was seen on Henderson. Lots of co/cr while touring on Mount Fox. D2 avalanche on east facing Mount Fox that appears to be on the SH layer, triggered by a [cornice](#) drop."

Region

Cooke City

Location (from list)

Goose Lake
