

From the photographer, "I observed one very large slide that broke 3-5 (or more) feet deep near the ground, around 2,500'+ wide, and ran nearly full track. Clearly not the sort of thing that you want to get on the wrong end of. The slide started around 3/4 of a mile south of Saddle and continued up to the south flank of the peak." The slide likely ran on Sunday night or Monday (12/22 or 23). Photo: B. VandenBos
